

The screenshot shows a PDF viewer window titled "BcdEdit.pdf". The left sidebar contains a navigation menu with the following items:

- BcdEdit /?
- PDF Document** (highlighted in blue)
- About

The main content area displays the "BCDEdit /displayorder" page. The title is "BCDEdit /displayorder" with a subtitle "8/23/2022 • 2 minutes to read • [Edit Online](#)". The text states: "The **/displayorder** command sets the display order to be used by the boot manager." Below this is a code block:

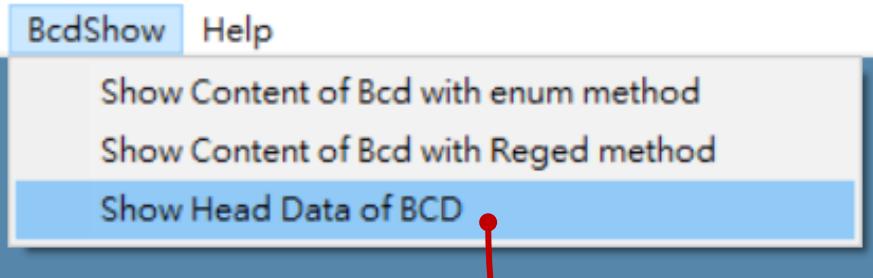

```
bcdeedit /displayorder <id> [...] [ /addfirst | /addlast | /remove ]
```

A "NOTE" section follows, stating: "Before setting BCDEdit options you might need to disable or suspend BitLocker and Secure Boot on the computer."

Parameters

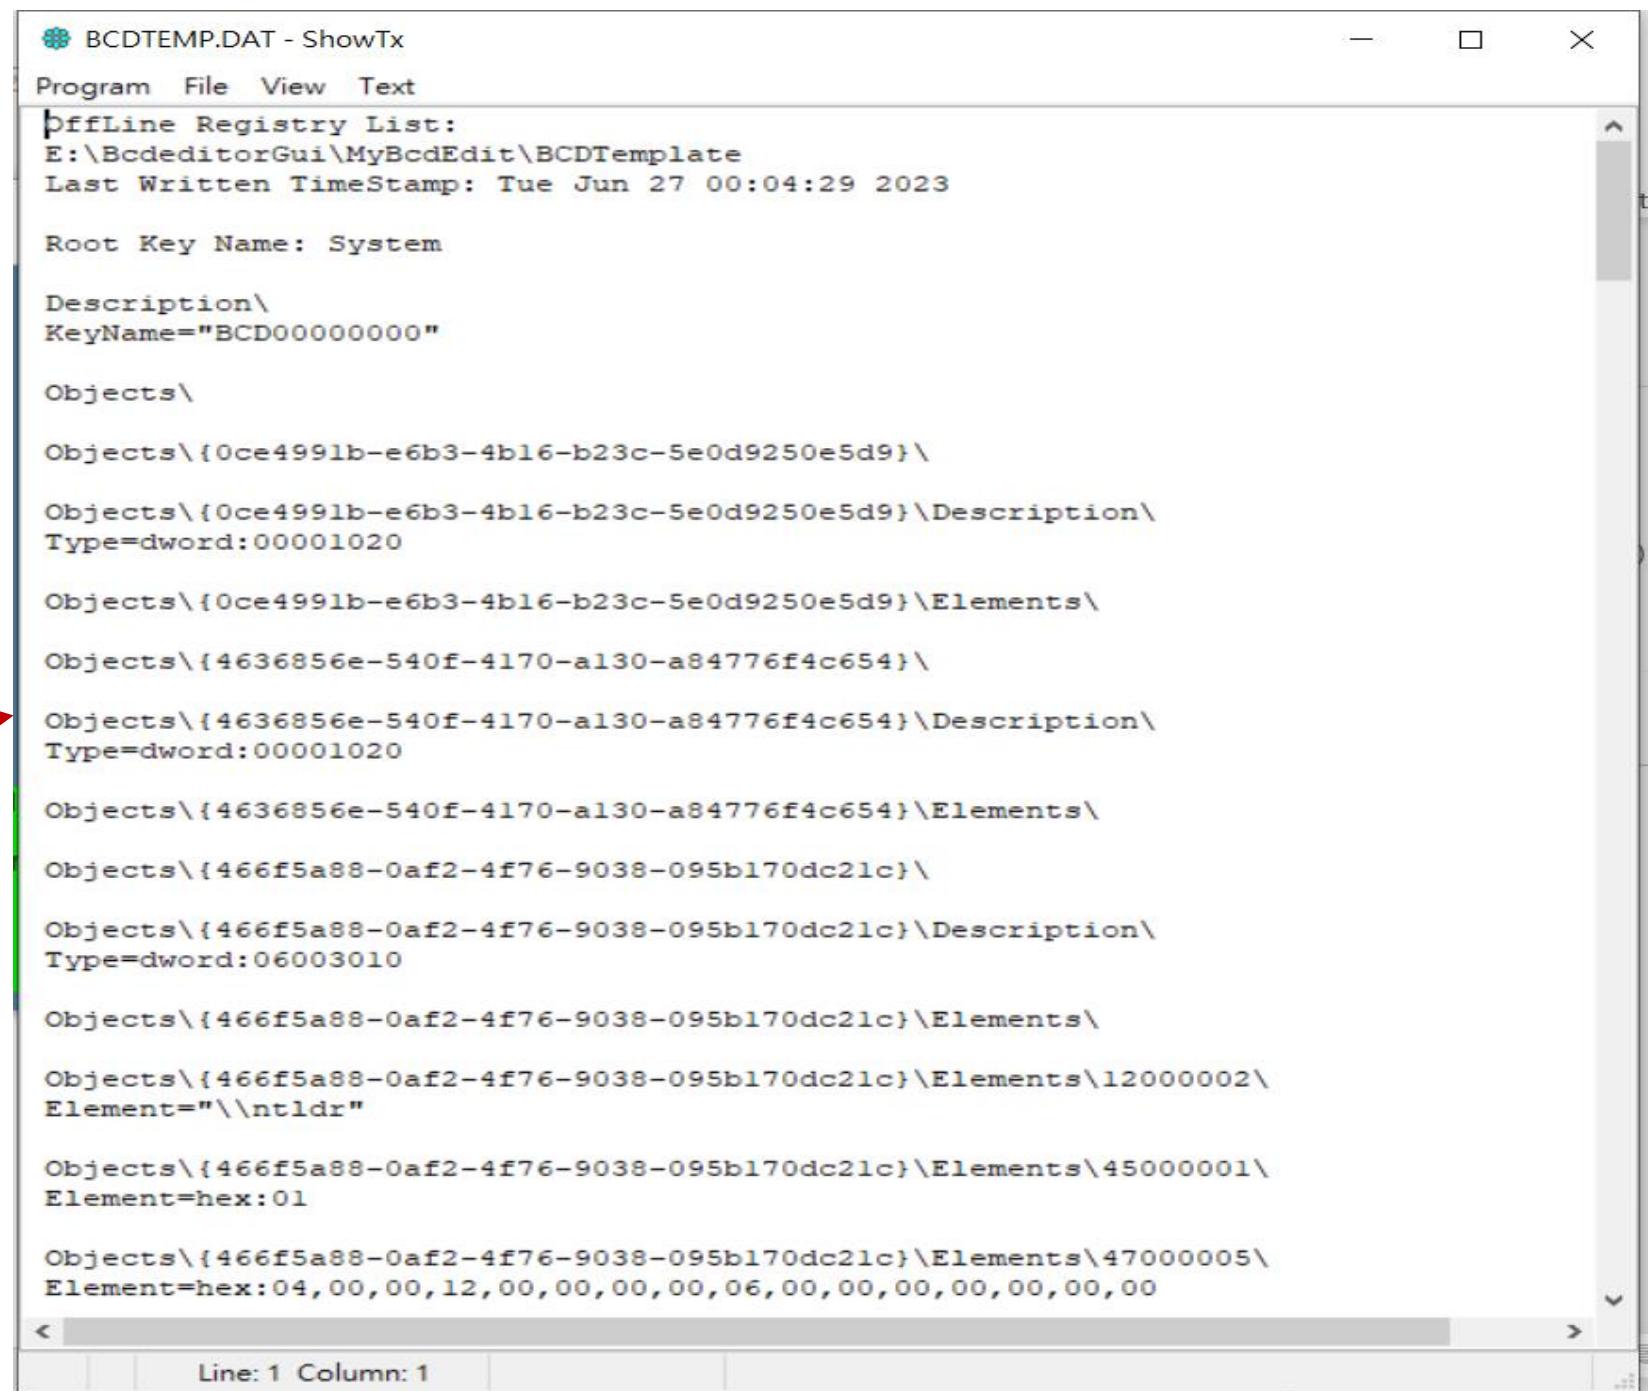

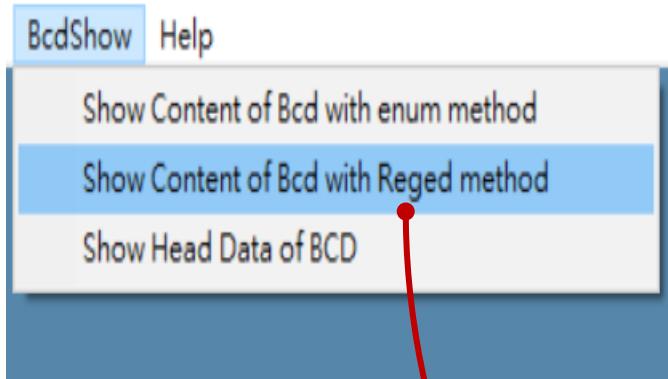

<id> [...] Specifies a list of identifiers that make up the display order. At least one identifier must be specified and they must be separated by spaces. For more information about identifiers, run "bcdedit /? ID".

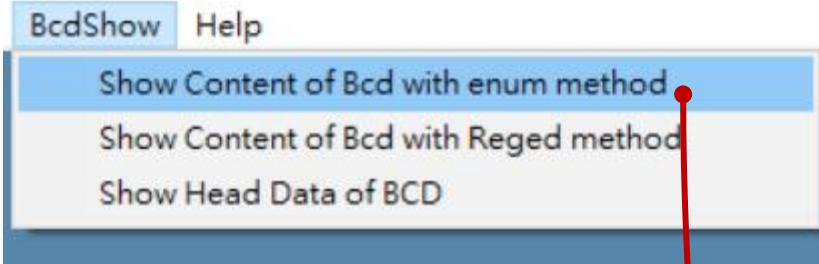

/addfirst Adds the specified entry identifier to the top of the display order. If this switch is specified, only a single entry identifier may be specified. If the specified identifier is already in the list, it will be moved to the top of the list.
